

ABSTRACT

5 [048] The invention is incorporated in a clamp that can quickly clamp and
release an object between two plates. The invention enables a user to quickly
clamp an object with one hand and without the need for mechanical assistance to
increase the clamping pressure on the clamped object like a screw clamp or a
ratcheting clamp. The invention enables a user to quickly clamp and release objects
10 such as bicycles, shotguns and other objects without damaging those objects in the
clamping process. The clamp can be mounted to a wall, table or other structure to
provide a convenient and easy way to store and mount objects.
